List API calls made by a user from log files

We have provided two .gz files that contain server logs. You have to submit a script that outputs all the API calls to a GET /txNewChecklistItemEntity by the user name abc1.xyz, in the order of occurrence.
An API call is logged in the following format, as you can see from the example below, with API endpoint, User, and time of logging highlighted in yellow.

2023-11-13 05:10:08.867 INFO 2697 --- [http-nio-8021-exec-657] o.a.s.f.security.AuthenticationFilter   : GET /txNewChecklistItemEntity?checklistDetailUuid=223b48b2-326d-4d8f-addb-5c29cbe5ed96& lastModifiedDateTime=1900-01-01T00:00:00.000Z&now=2023-11-13T05:01:10.397Z&size=1 00&page=63 User: abc1.xyz Organisation: XYZ Time: 779 ms

The two .gz files are available for download from here.
